Chiropractic Informed Consent

To the Patient: Please read this entire document prior to signing. It is important that you understand the information contained in this document. Please ask questions before you sign if there is anything that is unclear.

The primary treatment I use as a Doctor of Chiropractic is spinal manipulative therapy. I may use my hands or a mechanical instrument upon your body in such ways as to move your joints. This may cause an audible "pop" or "click", similar as you may experience when you "crack" your knuckles. You may feel a sense of movement.

As part of the analysis, examination, and treatment, you are consenting to the following procedures as needed:

Spinal manipulative therapy, vital signs, range of motion testing, postural analysis, muscle strength, hot/cold pack therapy, palpation, orthopedic testing, neurological testing, traction, electrical muscle stimulation, ultrasound, urinalysis, blood testing, hair analysis, and x-ray.

As with any healthcare procedure, there are certain complications, which may arise during chiropractic manipulation and therapy. These complications include, but are not limited to: fractures, disc injuries, dislocations, muscle strain, cervical myelopathy, costovertebral strains and separations, and burns. Some types of manipulations of the neck have been associated with injuries to the arteries in the neck leading to or contributing to serious complications including stroke. Some patients will feel some stiffness and soreness following the first few days of treatment. I will make every reasonable effort during the examination to screen for contra-indications to care; however, if you have a condition that would otherwise not come to my attention, it is your responsibility to inform me. The incidences of these complications are very rare.

Other treatment options for your condition may include: Self-administered over the counter analgesics and rest, medical care, hospitalization, surgery, and possibly others. If you choose one of these options, you should be aware that there are risks and benefits of such options and you may wish to discuss these with your primary medical physician. Remaining untreated may allow the formation of adhesions and reduce mobility which may set up a pain reaction further reducing mobility. Over time this process may complicate treatment, making it more difficult and less effective the longer it is postponed.
